DETAILED ACTION

Allowable Subject Matter

1. Claims 1-21 are allowed.

The present invention is directed to an editing device for editing a high-definition television signal by using a computer. The independent **claims 1, 8 and 15** identify uniquely distinct features “the central processing unit writes a calculation starting instruction to the memory of the edit processing unit; the effector reads the calculation starting instruction and reads the effect parameter from the memory of the edit processing unit and calculates a read address of data for each pixel using the effect parameter; the effector then changes a status in the memory of the effector indicating that the high-definition television video data decompressed by the first decoder is able to be received; the central processing unit then reads the status in the memory of the effector”. The closest prior art U.S. Patent No. 6,226,038 to Frink et al. and U.S. Patent Pub. No. 2007/0189709 A1 to Ageishi et al. disclose editing devices, either singularly or in combination, fail to anticipate or render the above under underlined limitations obvious.
